SUMMARY

AWS Certified Cloud Practitioner (CLF-C02) and BCA graduate specializing in serverless, event-driven backend systems on AWS. Independently built and stress-tested production-grade cloud applications – including a high-concurrency ticketing engine that sustained 21,000 simulated concurrent users with zero data loss, and a fully Terraform-provisioned serverless audit pipeline. Proficient in Python, Lambda, SQS, DynamoDB, and Infrastructure-as-Code. Seeking a fresher cloud or backend engineering role.

EDUCATION

Banasthali Vidyapith <i>Bachelor of Computer Applications (BCA) – CGPA: 8.15/10.0</i>	Rajasthan, India May 2026
Navy Children School <i>Senior Secondary (12th): 86% Secondary (10th): 88%</i>	Delhi, India May 2023

TECHNICAL SKILLS

Cloud (AWS): Lambda, SQS, DynamoDB, S3, SNS, IAM, API Gateway, CloudWatch
Infrastructure & DevOps: Terraform (IaC), Docker, GitHub Actions (CI/CD), Linux, Git
Languages & Frameworks: Python (FastAPI, Flask, Boto3), Next.js, Redis, SQL
Concepts: Event-Driven Architecture, Serverless Computing, Concurrency Control, REST API Design, Distributed Systems

PROJECTS

- Flux-Order: High-Concurrency Ticketing Engine** | Python, Redis, AWS SQS, DynamoDB | [Live Demo](#) Dec 2025
- Designed a decoupled, asynchronous ticketing backend (Next.js frontend, Flask API, SQS message broker, Python workers) to absorb flash-sale traffic spikes without server degradation.
 - Eliminated double-booking race conditions using Redis Distributed Locks (Mutex); stress-tested with Locust at 21,000 concurrent users, achieving 100% transactional consistency and zero data corruption.
 - Engineered an idempotent SQS consumer with DynamoDB deduplication to guarantee exactly-once order processing across all retry cycles.
- Bill-E: Serverless Audit Pipeline** | AWS Lambda, SQS, S3, DynamoDB, Terraform, Python | [Live Demo](#) Nov 2025
- Provisioned a zero-idle-cost, event-driven ingestion pipeline (S3 – SQS – Lambda) using Terraform IaC, eliminating dedicated server costs while maintaining elastic auto-scaling.
 - Built a heuristic risk-scoring engine to parse unstructured OCR receipt data; surfaced live pipeline states (Queued, Processing, Analyzed) on a real-time Next.js dashboard via DynamoDB polling.
 - Implemented fault-tolerant Lambda retry logic with a 25s timeout interceptor for OCR API rate limits; configured SNS for instant high-risk auditor alerts (risk score above threshold).
- Sentinel: ML-Based Network Intrusion Detection** | Python, FastAPI, Scapy, Scikit-learn Jan 2026 – Apr 2026
- Collaborated on a real-time NIDS backend using Scapy to parse high-throughput network packets; trained anomaly detection model on the NSL-KDD benchmark dataset for multi-class traffic classification.
 - Exposed live threat metrics and anomaly alerts via a low-latency FastAPI REST interface to a centralized security monitoring dashboard.
- Vibe-Check: Serverless Sentiment API** | AWS Lambda, API Gateway, DynamoDB, SNS, Python Nov 2024
- Built a public REST API on AWS API Gateway backed by a Lambda-powered rule-based sentiment engine; auto-routes negative feedback events to support teams via SNS within a 2-second notification window.

EXPERIENCE & LEADERSHIP

- Mayukh Tech Fest – Banasthali Vidyapith** Rajasthan, India
Workshop Lead, Core Organizing Team Jan 2025 – Mar 2026
- Led the Workshop vertical across two annual festival cycles, driving **Rs. 1,32,126** in paid workshop revenue while managing a team of sub-leads and volunteers end-to-end.
 - Owned full-cycle operations: attendee registration (500+ per edition), UPI/QR-based finance collection, venue permits, speaker coordination, and live workshop execution across all sessions.

CERTIFICATIONS & LANGUAGES

Certifications: [AWS Certified Cloud Practitioner \(CLF-C02\)](#) (2025) | [Intro to Generative AI – Google Cloud](#) (2026)
Languages: English (Fluent), Hindi (Native), French (Diploma – Banasthali Vidyapith)
